Holocentric SR&F and HP Quality Center now work together

Get the best of both worlds — end to end requirements definition, management and testing with Holocentric Modeler and HP Quality Center 9.2 integration.

- ✓ Use Holocentric's proven approach to define your requirements
- ✓ Accelerate test planning by exporting requirements directly into HP Quality Center
- ✓ Use HP Quality Center to manage requirements and ensure that your requirements are met
- ✓ Easily stay in-sync as requirements change and when executing your tests

Holocentric SR&F and HP Quality Center work together to give you a complete requirements definition & fulfillment solution.

Key Features:

- Bi-directional synchronization of requirements
- Synchronization Report
- Ability to export Holocentric Modeler requirement relationships into Quality Center as requirement traceability relationships
- Easily track those requirements modified during synchronization
- Configurable synchronization rules

Holocentric SR&F and HP Quality Center now work together

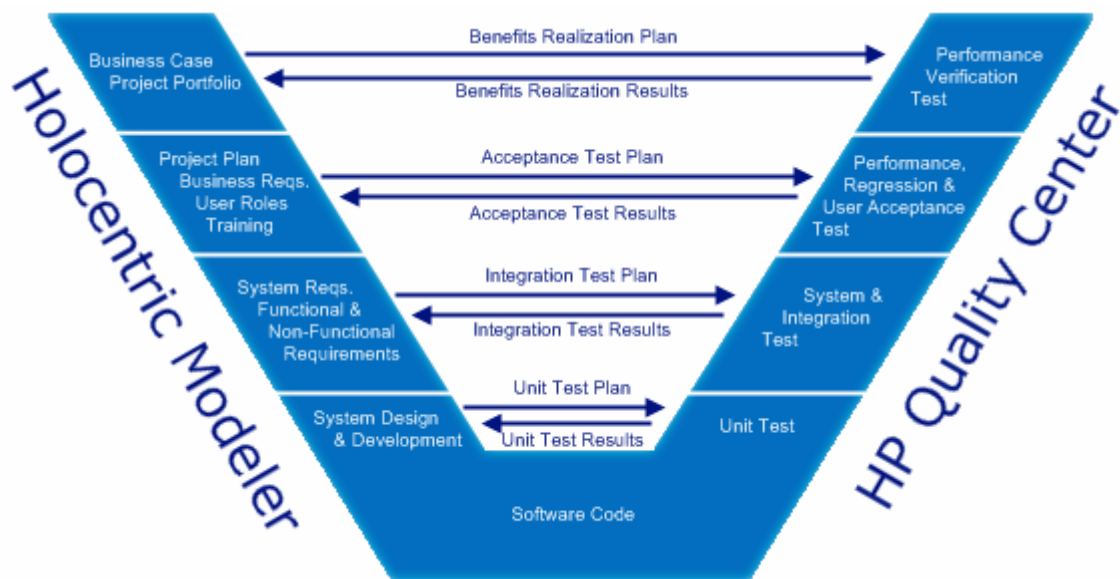

System Requirements & Fulfillment

The Holocentric SR&F Accelerator gives you a proven framework for modeling your system requirements.

Using Holocentric Modeler to define requirements allows you to build an integrated model – ensuring your IT System Requirements will be aligned with your business processes and helping achieve your desired business outcomes.

Once defined, you can accelerate your quality assurance by importing your high level business requirements, process requirements and system requirements directly into HP Quality Center.

Within HP Quality Center you can then automatically generate test cases from your requirements for complete coverage, then execute and monitor your tests and assess solution quality.

Holocentric SR&F works with HP Quality Center at every stage, from business benefits right through to unit testing.

Requirements Change Management

We all know business needs and requirements change. That's why requirements change management is integral to your success.

Holocentric Modeler's configurable requirements synchronization wizard automatically synchronizes your requirements with HP Quality Center. Furthermore, Modeler generates a synchronization report, and both Holocentric and HP Quality Center flag modified requirements by updating their status, color and notes.

About Holocentric

Holocentric, founded in 2003, is a privately-owned Australian software company which develops and markets multi-dimensional organizational modeling tools. Holocentric helps organisations to better understand, manage and reduce the risk of organizational change. The company's flagship solution, Holocentric Modeler, enables organizations to create a comprehensive model of their people, systems and processes, and all the interdependencies between them. Holocentric's solution is unique in providing a single enterprise-wide modeling solution for Corporate Governance, Business Performance Improvement, Value Chain Management, Human Performance Improvement, Enterprise Architecture, System Requirements & Fulfillment and Software Re-engineering.
